TITLE : TELEPHONE SET

ABSTRACT : PROBLEM TO BE SOLVED: To simply identify a speech opposite party, in response to information of the cell destination with respect to the telephone set such as a PHS.

SOLUTION: This telephone set is provided with a storage section 4 to which telephone numbers are registered, a voice-timing processing protocol control section 10 that conducts time division multiplex processing for generating a prescribed data stream, a transmission reception use antenna 14, a light-emitting section 6 that emits plural colors, and a control section 3 that changes a light emission color of the light-emitting section 6 in response to transmission reception information and the emitted light of the light-emitting section 6 is lighted through an antenna case light-transmitting section. Then the color light emitted is changed and displayed through the transmission reception of a speech request and character information, and furthermore when there is a speech request, whether the request is coming from a speech request from a specific person stored in the storage section 4 or a speech request from some other party is identified by changing the emitted light.
